

Delcran Stock Control Module

Integrated Full Bill of Materials

Fully Tracked stock in transit between warehouses and locations

Detail on screen enquiry

Key Benefits

Bill Of Materials

Bill Of Materials part of the Stock Control Module. Allows easy editing via graphical tree interface. Includes reverse "Where Used" lookup.

Tracking Multiple Locations

Stock items can be fully tracked with their batch identities and expiry dates across any mix of locations.

Full Traceability

Lot / Serial number tracking throughout the system. Items tracked at all levels and can be searched by lot / serial number.

Minimise Cost of Inventory

Aims to minimise the cost of holding stock and ensure availability when required.

Delcran Stock Control Module is a vital tool to any business that is looking to minimise the cost of holding stock while at the same time maximising their levels of customer service.

Track stock items across multiple locations within warehouses, transfer stock items between locations while still tracking all batch and expiry information.

Completely integrates with other Delcran modules for total control.

Maximises operation efficiency by ensuring that the correct item is used from the correct location, this helps to stop stock write off's.

Different methods of Stocktaking catered for, including cycle count, location count and full counts. All stocktaking documentation and forms can be printed from the system.

Enquiry can be by stock item or location showing all items within a specific warehouse location.

Items can be flagged as obsolete thus preventing any more transaction be processed.

Groups and categories available so that analysis can be structured.

Full reporting and analysis facilities are provided. Reports can be viewed, printed, emailed or produced to spreadsheet.

All Delcran modules are fully supported by our dedicated support team.

Master Stock Record	Complete stock identity with all costing, Min/Max & reorder levels, type of item and shelf life.
Multi Level Bill Of Materials	Key element of the Stock Control module, allows for copying bills, editing for non standard production. All costs are maintained in real time avoiding the need for lengthy batch re-costing runs.
Stock Movements	Can be manual issue or receipt, or can be the receipt against a Purchase Order. All movements from Sales Order Shipping or Picking are automatically generated with the relevant batch identities.
Stocktaking Options	Multiple methods of stocktaking available within the system. Stock counting packs are produced by the system for warehouses. Stock-taking can be a full count or part of an ongoing cycle count.
Scrap Recording	If there is a need to write off stock, the system allows for the analysis of that write off based on production process, material shelf life or operator.
Transit	Fully documented documentation and tracking when stock is moved between warehouses and locations.
Quarantine	Stock items can be moved into quarantine are which stops it being used. Stock is held in this state and not usable until such time as it is transferred back to normal stock.
Group & Category Analysis	User defined stock groups and categories allow for the financial analysis of stock movements and product sales, to be at the required level of detail.
Intrastat and VIES	Automatic submission of Interstat and VIES returns to Revenue authorities. Reports are submitted electronically in XML format files to the defined specification.
Flexible Reporting	We provide a comprehensive number of standard reports. Each report is controlled by a series of user defined criteria allowing the reports to produce only the exact dataset required.
User defined program and data access	Security id paramount in our system, all program access is by rights that are defined for each user. Administrators can also define users are having enquiry only access, in addition to which data files can be processed.
